

# Topics

---

## 1. Setup commands

- Configure
  - Cloning
  - Creating New

## 2. Frequently used ones

- Get current remote repo (pull and branch)
- Update changes to local repo (add and commit)
- Sending changes to remote repo (merge and push)

## 3. Rest Misc Commands

# Setup

---

## Configure (git config)

- Username:  
`git config user.name "Homo Sepian"`
- Email:  
`git config user.email "abcd@xyz.com"`

This name and email is used to track who has committed which changes.

Use `git config --global <rest code>` to avoid configuring these for each repository

## Cloning

`git clone <link to repository>`

## Creating

Go inside folder:

`git init`
